OPL1000

ULTRA-LOW POWER 2.4GHZ WI-FI + BLUETOOTH SMART SOC

BLE to WiFi Application Development Guide

OPULINKS

http://www.opulinks.com/

REVISION HISTORY

Date	Version	Contents Updated
2018/4/1	0.1	• Initial Release
2018/6/19	0.2	• Add message chart and add new command IDs
2018/6/20	0.3	• Modify WIFI status part
2018/7/19	0.4	• Add document application scope, abbr., reference etc.

TABLE OF CONTENTS

1. 介绍

1.1. 文档应用范围

本文介绍了通过 BLE 配网 WIFI AP 的过程，使用的 API 调用接口以及消息流程。对应于 OPL1000 SDK Package 的示例工程 SDK\APS_PATCH\examples\bluetooth\blewifi。

1.2. 缩略语

Abbr.	Explanation
BLE	Bluetooth Energy 低功耗蓝牙
WIFI	Wireless Fidelity 无线局域网

1.3. 参考文献

[1] BLE 配网 WIFI AP 演示说明 OPL1000-Demo-BLE-setup-network-guide.pdf

2. List of Command ID

Name	Value	Description
BLEWIFI_REQ_SCAN	0x0000	The app sends a request of scan command to driver.
BLEWIFI_REQ_CONNECT	0x0001	The app sends a request of connect command to driver.
BLEWIFI_REQ_DISCONNECT	0x0002	The app sends a request of disconnect command to driver.
BLEWIFI_REQ_RECONNECT	0x0003	The app sends a request of reconnect command to driver.
BLEWIFI_REQ_READ_DEVICE_INFO	0x0004	The app sends a request of get device information.
BLEWIFI_REQ_WRITE_DEVICE_INFO	0x0005	The app sends a request of set device information.
BLEWIFI_REQ_WIFI_STATUS	0x0006	The app send a request of get Wi-Fi status
BLEWIFI_REQ_RESET	0x0007	The app send a request of reset Wi-Fi record
BLEWIFI_RSP_SCAN_REPORT	0x1000	Driver reports an event of scan results to app.
BLEWIFI_RSP_SCAN_END	0x1001	Driver reports an event of scan end to app, to notify app to stop to receive scan result events.
BLEWIFI_RSP_CONNECT	0x1002	Driver reports an event of connect to app.
BLEWIFI_RSP_DISCONNECT	0x1003	Driver reports an event of disconnect to app.
BLEWIFI_RSP_RECONNECT	0x1004	Driver reports an event of reconnect to app.
BLEWIFI_RSP_READ_DEVICE_INFO	0x1005	Driver reports data of device information.

Name	Value	Description
BLEWIFI_RSP_WRITE_DEVICE_INFO	0x1006	Driver reports an event about whether the data is set successfully or not.
BLEWIFI_RSP_WIFI_STATUS	0x1007	Driver report an event of Wi-Fi status of device to app.
BLEWIFI_RSP_RESET	0x1008	Driver report an event reset results to app.

3. The Usage of Command ID

3.1. SCAN REQUEST

Bytes	2	2	1	1
	cmd_id	data_length	show_hidden	scan_type
	Header		Data	

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.
- Show_hidden: Enable to scan AP whose SSID is hidden; enable (1), disable (0).
- Scan_type: Scan type, active or passive; active (0), passive (1).

Example for frame format:

Bytes	2	2	1	1
	cmd_id	data_length	show_hidden	scan_type
Value	0x0000	0x0002	01	00

3.2. SCAN REPORT RESPONSE

Bytes	2	2	1	1~32	6	1	1
	cmd_id	data_length	Ssid_length	ssid	bssid	Auth_mode	Rssi
	Header			Data			

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.

- Ssid_length: Length of the SSID.
- Ssid: Stores the predefined SSID.
- Bssid: AP's MAC address.
- Auth_mode: This defines the wireless authentication mode to indicate the Wi-Fi device authentication attribute. Open (0), WEP (1), WPA_PSK (2), WPA2_PSK (3), WPA_WPA_2_PSK (4), WPA2_ENTERPRISE (5).
- Rssi: Records the RSSI value when probe response is received.

Example for frame format:

Bytes	2	2	1	1~32	6	1	1
	cmd_id	data_length	Ssid_length	ssid	bssid	Auth_mode	Rssi
Value	0x1000	0x0017	08	44 2d 4c 69 6e 6b 5f 44	74 DA DA E7 08 F1	03	1E

3.3. SCAN RESPONSE END

Bytes	2	2
	cmd_id	data_length

Header

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.

Example for frame format:

Bytes	2	2
	cmd_id	data_length
Value	0x1001	0x0000

3.4. CONNECT REQUEST

Bytes	2	2	6	1	8~63
	cmd_id	data_length	bssid	password_length	password
	Header		Data		

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.
- Bssid: AP's MAC address.
- Password_length: The length of the password.
- Password: The password of the target AP.

Example for frame format:

Bytes	2	2	6	1	8~63
	cmd_id	data_length	bssid	password_length	password
Value	0x0001	0x00F0	74 DA DA E7 08 F1	08	01 02 03 04 05 06 07 08

3.5. CONNECT RESPONSE

Bytes	2	2	1
	cmd_id	data_length	status
	Header		Data

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.
- Status: Return success (0) or failed reason code (1).

Example for frame format:

Bytes	2	2	1
	cmd_id	data_length	status
Value	0x1002	0x0001	00

3.6. DISCONNECT REQUEST

Bytes	2	2
	cmd_id	data_length
	Header	

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.

Example for frame format:

Bytes	2	2
	cmd_id	data_length
Value	0x0002	0x0000

3.7. DISCONNECT RESPONSE

Bytes	2	2	1
	cmd_id	data_length	status
	Header		Data

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.
- Status: Return success (0) or failed reason code (1).

Example for frame format:

Bytes	2	2	1
	cmd_id	data_length	status
Value	0x1003	0x0001	00

3.8. RECONNECT REQUEST

Byte	2	2
	cmd_id	data_length
	Header	

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.

Example for frame format:

Byte	2	2

	cmd_id	data_length
Value	0x0003	0x0000

3.9. RECONNECT RESPONSE

Byte	2	2	1
	cmd_id	data_length	status
	Header		Data

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.
- Status: Return success (0) or failed reason code (1).

Example for frame format:

Byte	2	2	1
	cmd_id	data_length	status
Value	0x1004	0x0001	00

3.10. READ DEVICE INFORMATION REQUEST

Byte	2	2
	cmd_id	data_length
	Header	

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.

Example for frame format:

Byte	2	2
	cmd_id	data_length
Value	0x0004	0x0000

3.11. READ DEVICE INFORMATION RESPONSE

Bytes	2	2	6	1	0~32
	cmd_id	data_length	Device_id	name_length	Manufacture_name
	Header			Data	

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.
- Device_Id: The device MAC address.
- Name_Length: The length of the manufacture name.
- Manufacture_Name: The device manufacture name.

Example for frame format:

Bytes	2	2	6	1	7
	cmd_id	data_length	Device_id	name_length	Manufacture_name
Value	0x1005	0x000E	AA BB CC DD EE FF	07	Example

3.12. WRITE DEVICE INFORMATION REQUEST

Bytes	2	2	6	1	0~32
	cmd_id	data_length	Device_id	name_length	Manufacture_name
	Header			Data	

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.
- Device_Id: The device MAC address.
- Name_Length: The length of the manufacture name.
- Manufacture_Name: The device manufacture name.

Example for frame format:

Bytes	2	2	6	1	8
	cmd_id	data_length	Device_id	name_length	Manufacture_name
Value	0x0005	0x000F	AA BB CC DD EE FF	08	Example2

3.13. WRITE DEVICE INFORMATION RESPONSE

Bytes	2	2	1
	cmd_id	data_length	status
	Header		Data

- CMD_ID: Command ID, please refer to Command ID section.
- Data_Length: Size of data.
- Status: Return success (0) or failed reason code (1).

Example for frame format:

Bytes	2	2	1
	cmd_id	data_length	status
Value	0x1006	0x0001	00

3.14. WIFI STATUS REQUEST

Bytes	2	2
	cmd_id	data_length

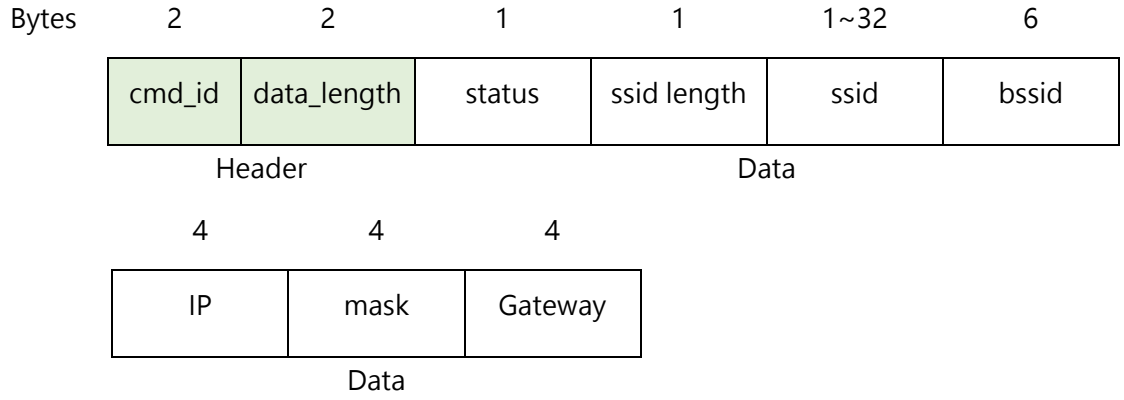
Header

- CMD_ID : command ID, please refer to section of Command ID.
- Data_Length : size of data

Example for frame format:

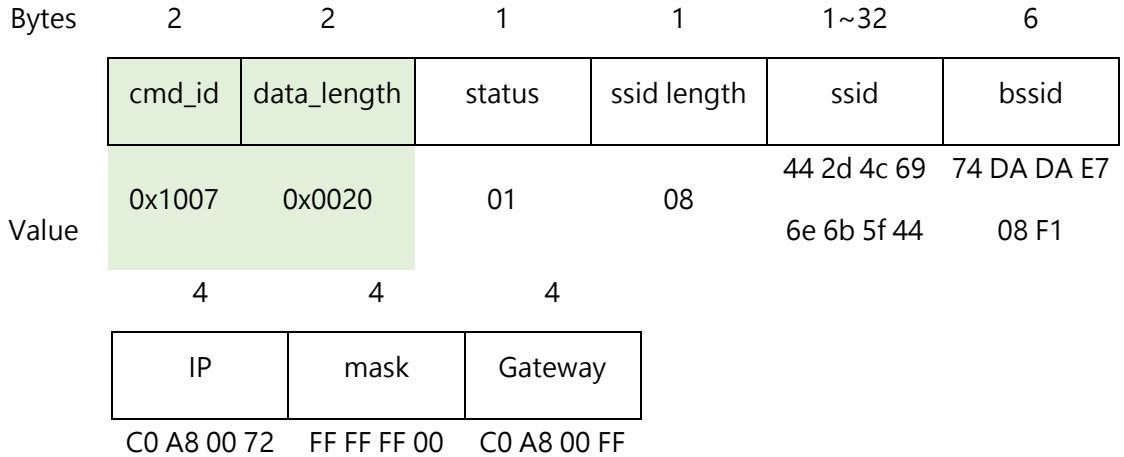
Bytes	2	2
	cmd_id	data_length
Value	0x0006	0x0000

3.15. WIFI STATUS RESPONSE



- CMD_ID : command ID, please refer to section of Command ID.
- Data_Length : size of data
- Status : return success (0) or failed reason code (1)
- Ssid_length: Length of the SSID.
- Ssid: Stores the predefined SSID.
- Bssid: AP's MAC address.
- IP: The IP address of device.
- Mask: The mask IP address of device.
- Gateway: The gateway IP address which get to device.

Example for frame format:



3.16. RESET REQUEST

Bytes	2	2
	cmd_id	data_length
	Header	

- CMD_ID : command ID, please refer to section of Command ID.
- Data_Length : size of data

Example for frame format:

Bytes	2	2
	cmd_id	data_length
Value	0x0007	0x0000

3.17. RESET RESPONSE

Bytes	2	2	1
	cmd_id	data_length	status
	Header		Data

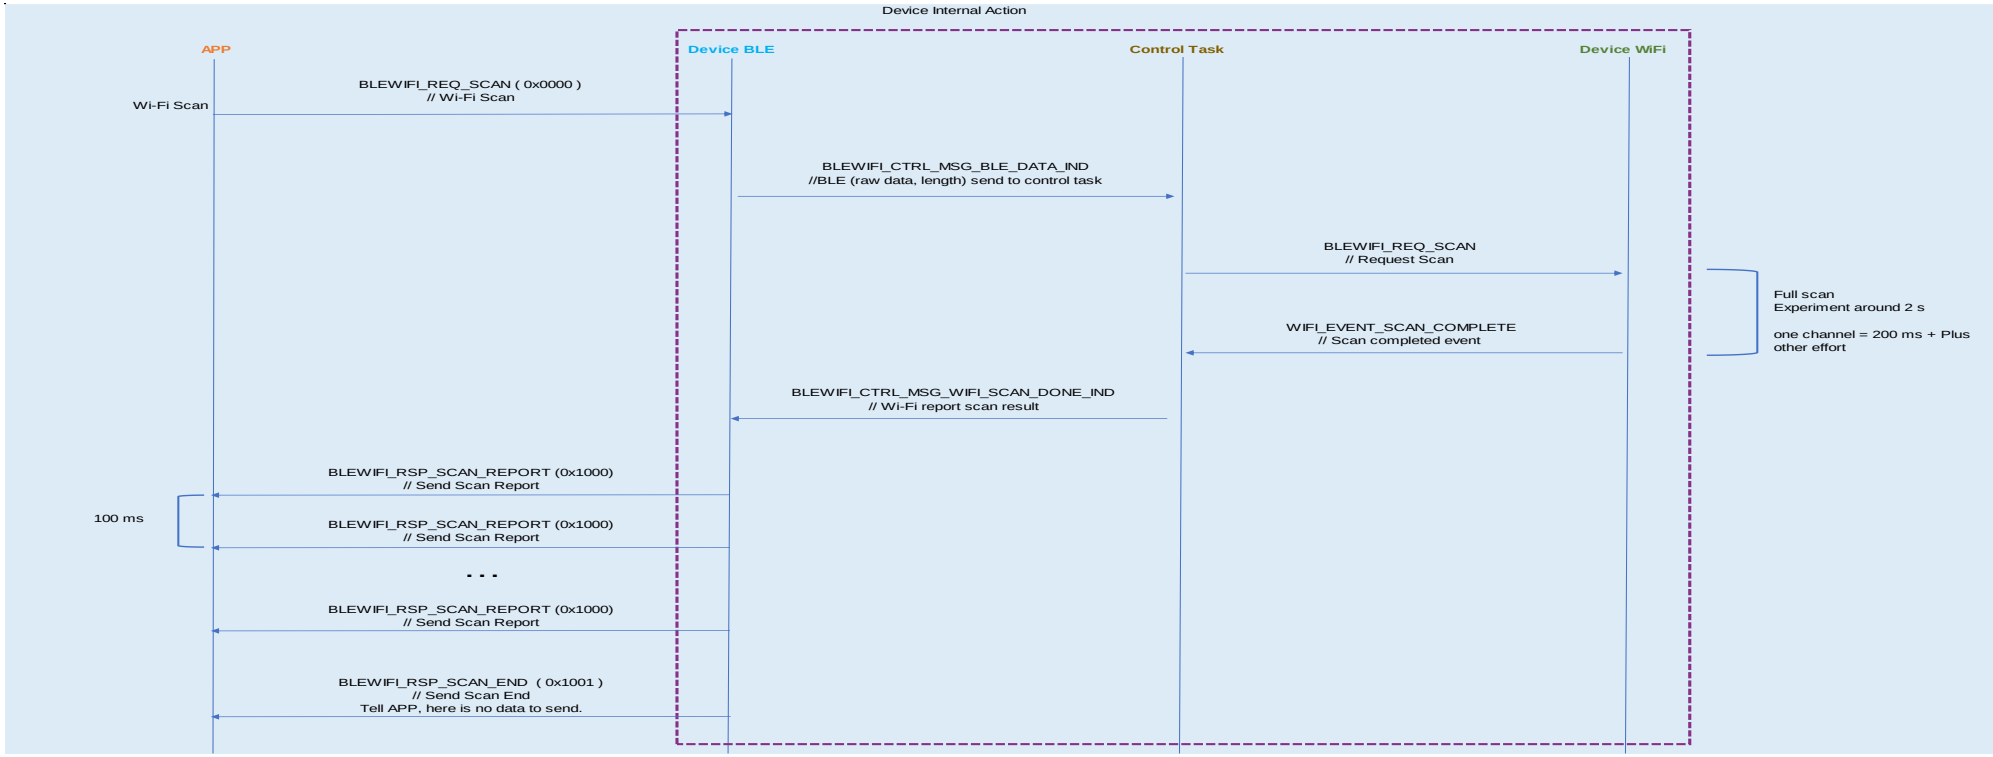
- CMD_ID : command ID, please refer to section of Command ID.
- Data_Length : size of data
- Status : return success (0) or failed reason code (1)

Example for frame format:

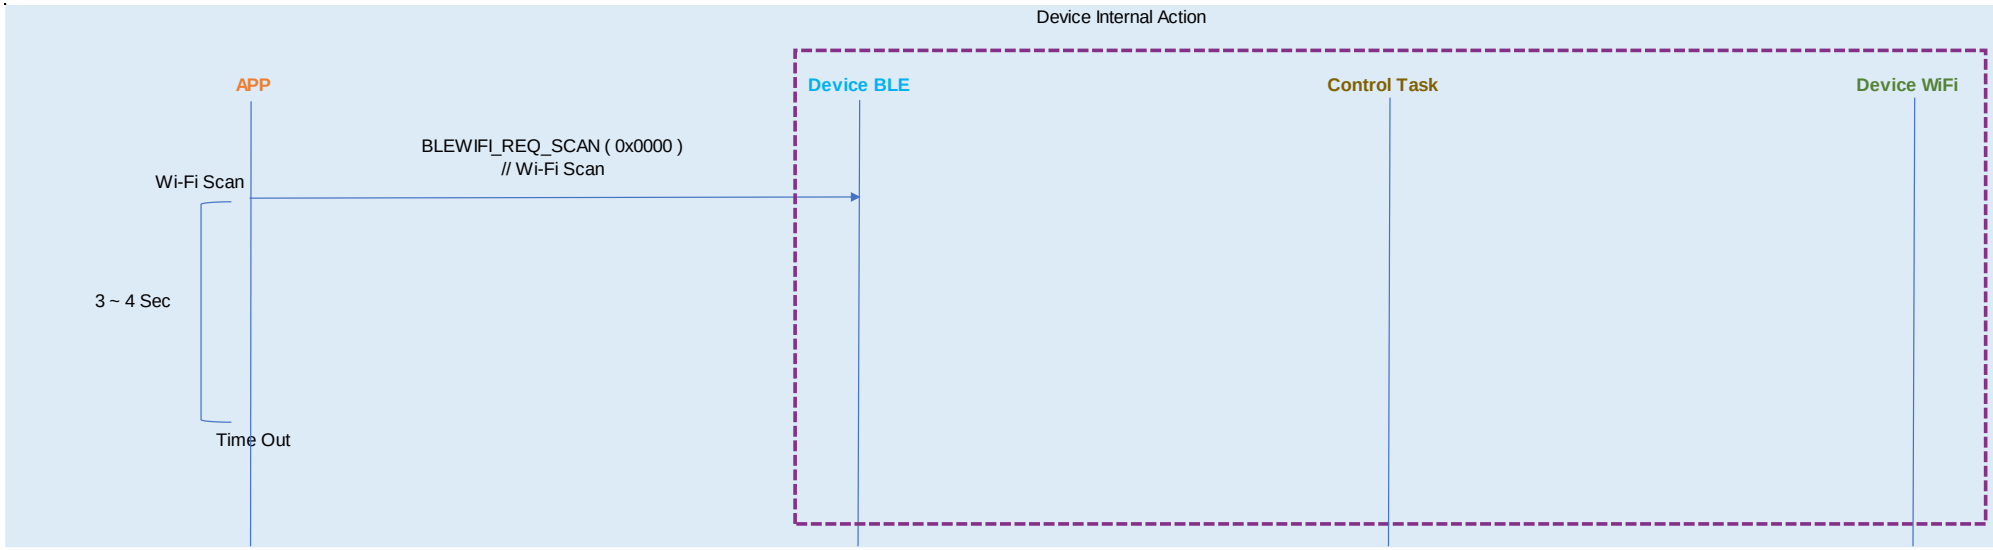
Bytes	2	2	1
	cmd_id	data_length	status
Value	0x1008	0x0001	00

4. Message Chart

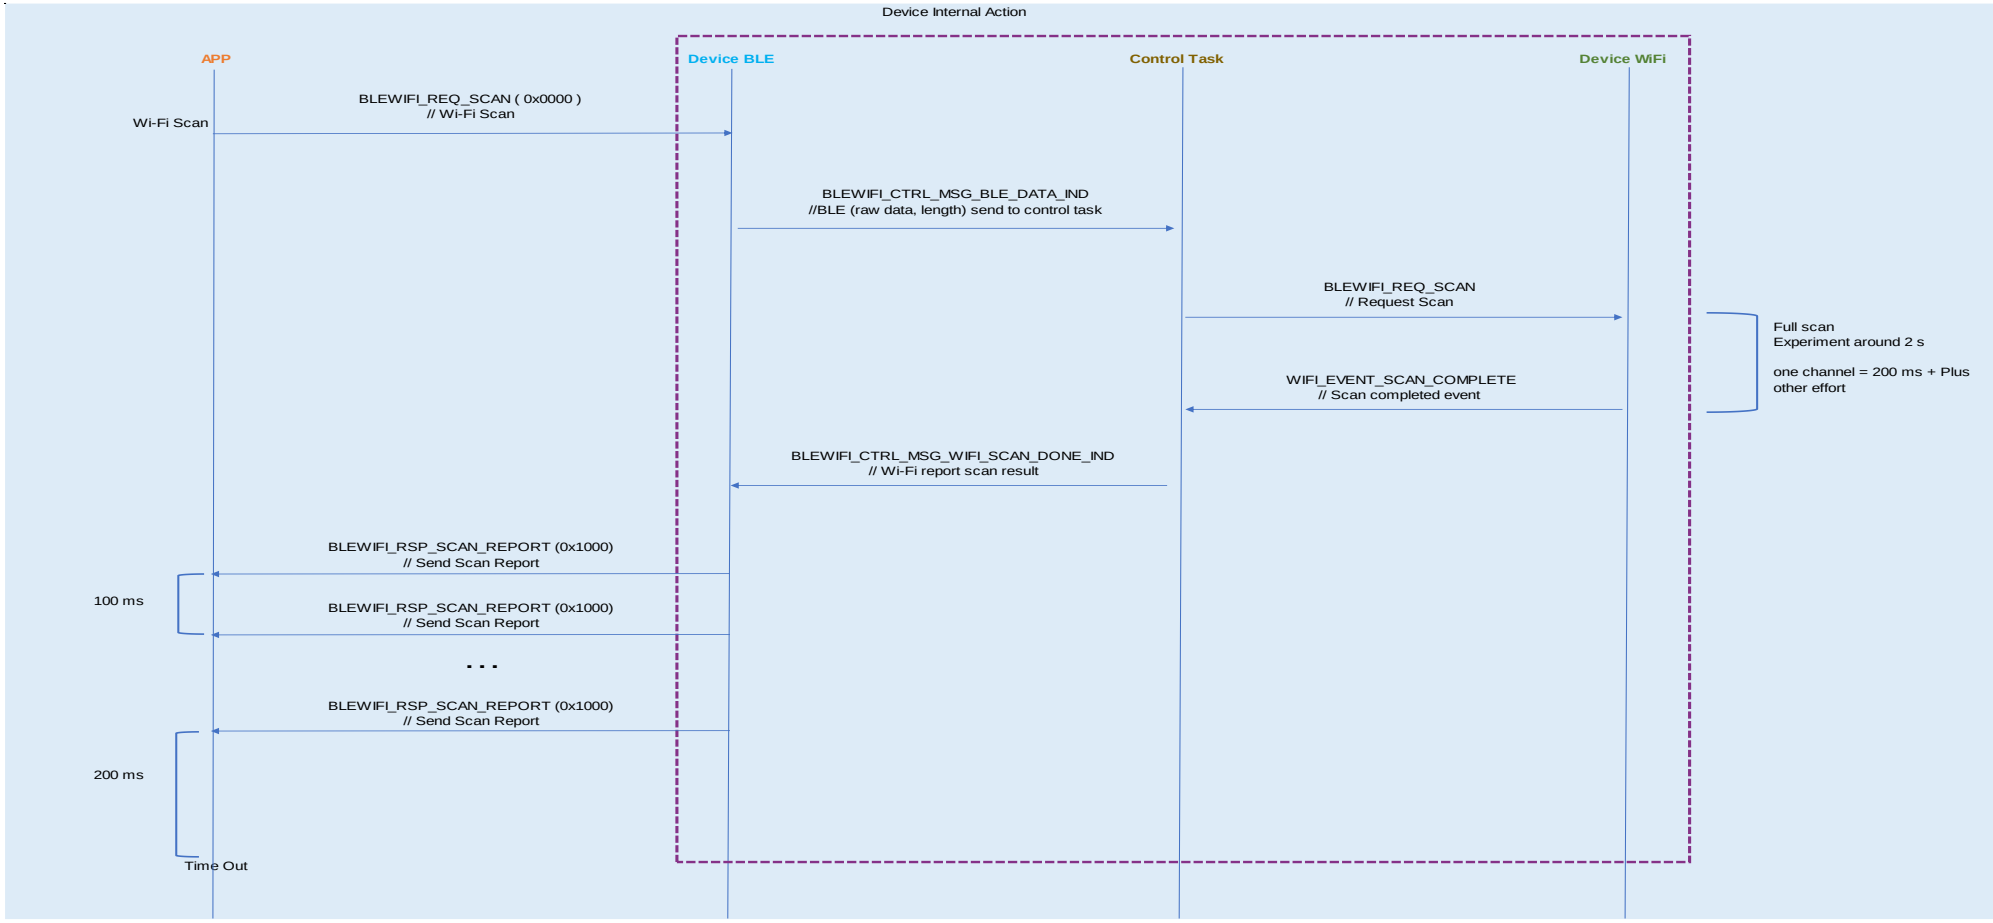
4.1. Wi-Fi Scan



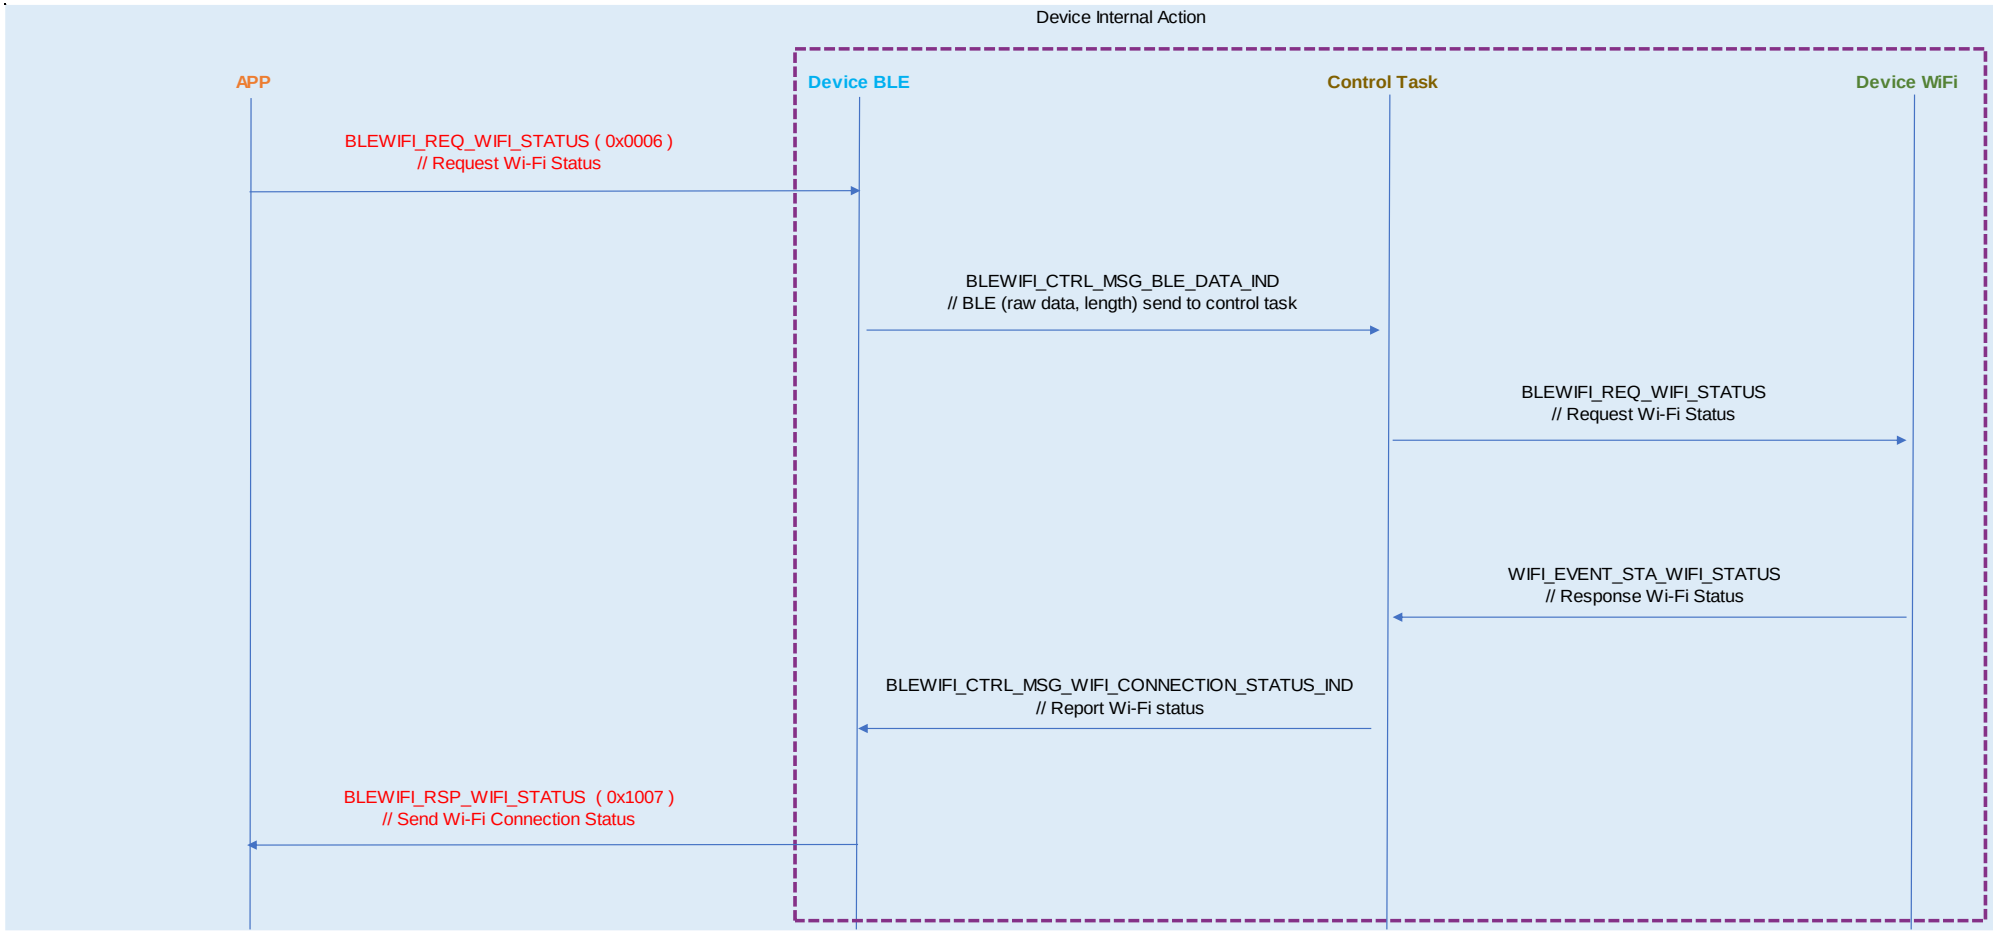
4.2. Wi-Fi Scan (TimeOut)



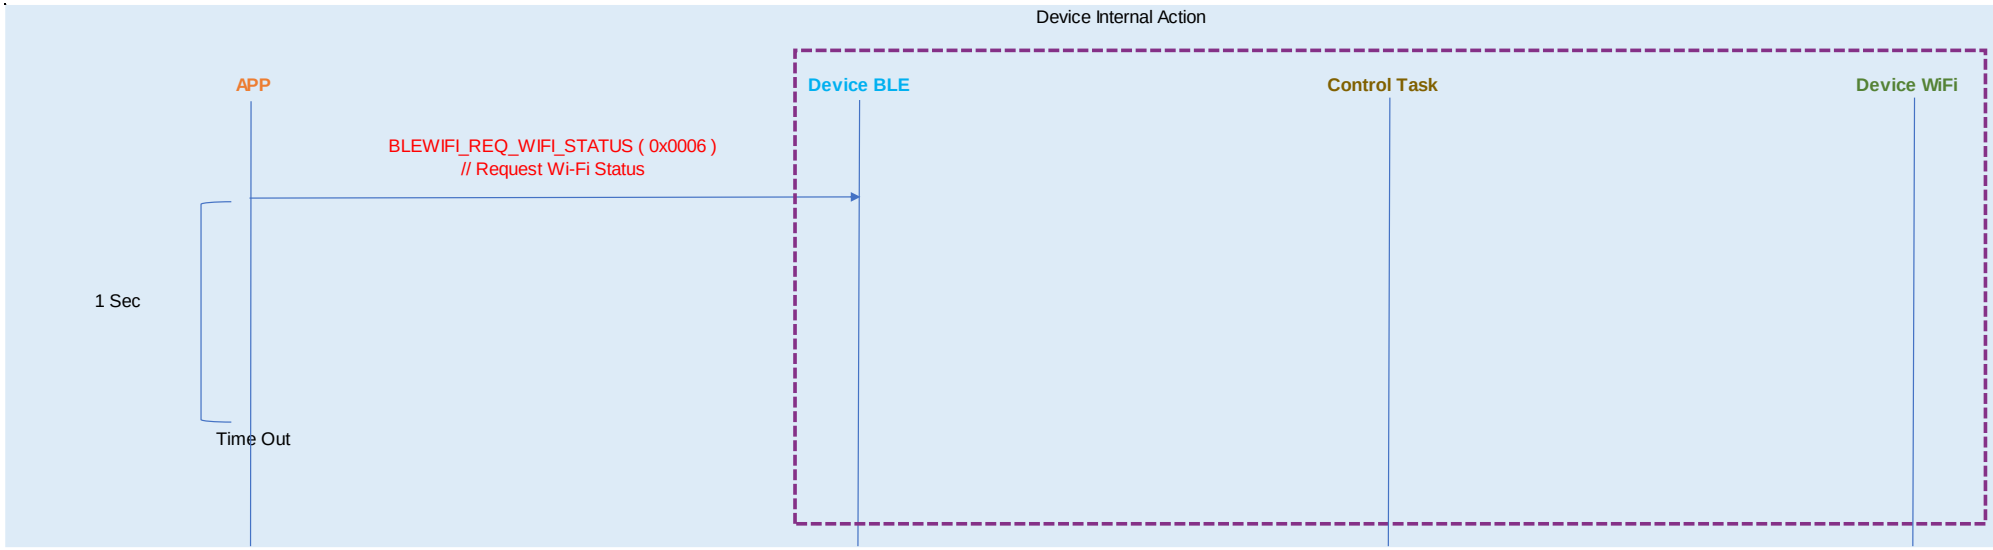
4.3. Wi-Fi Scan (REPORT TimeOut)



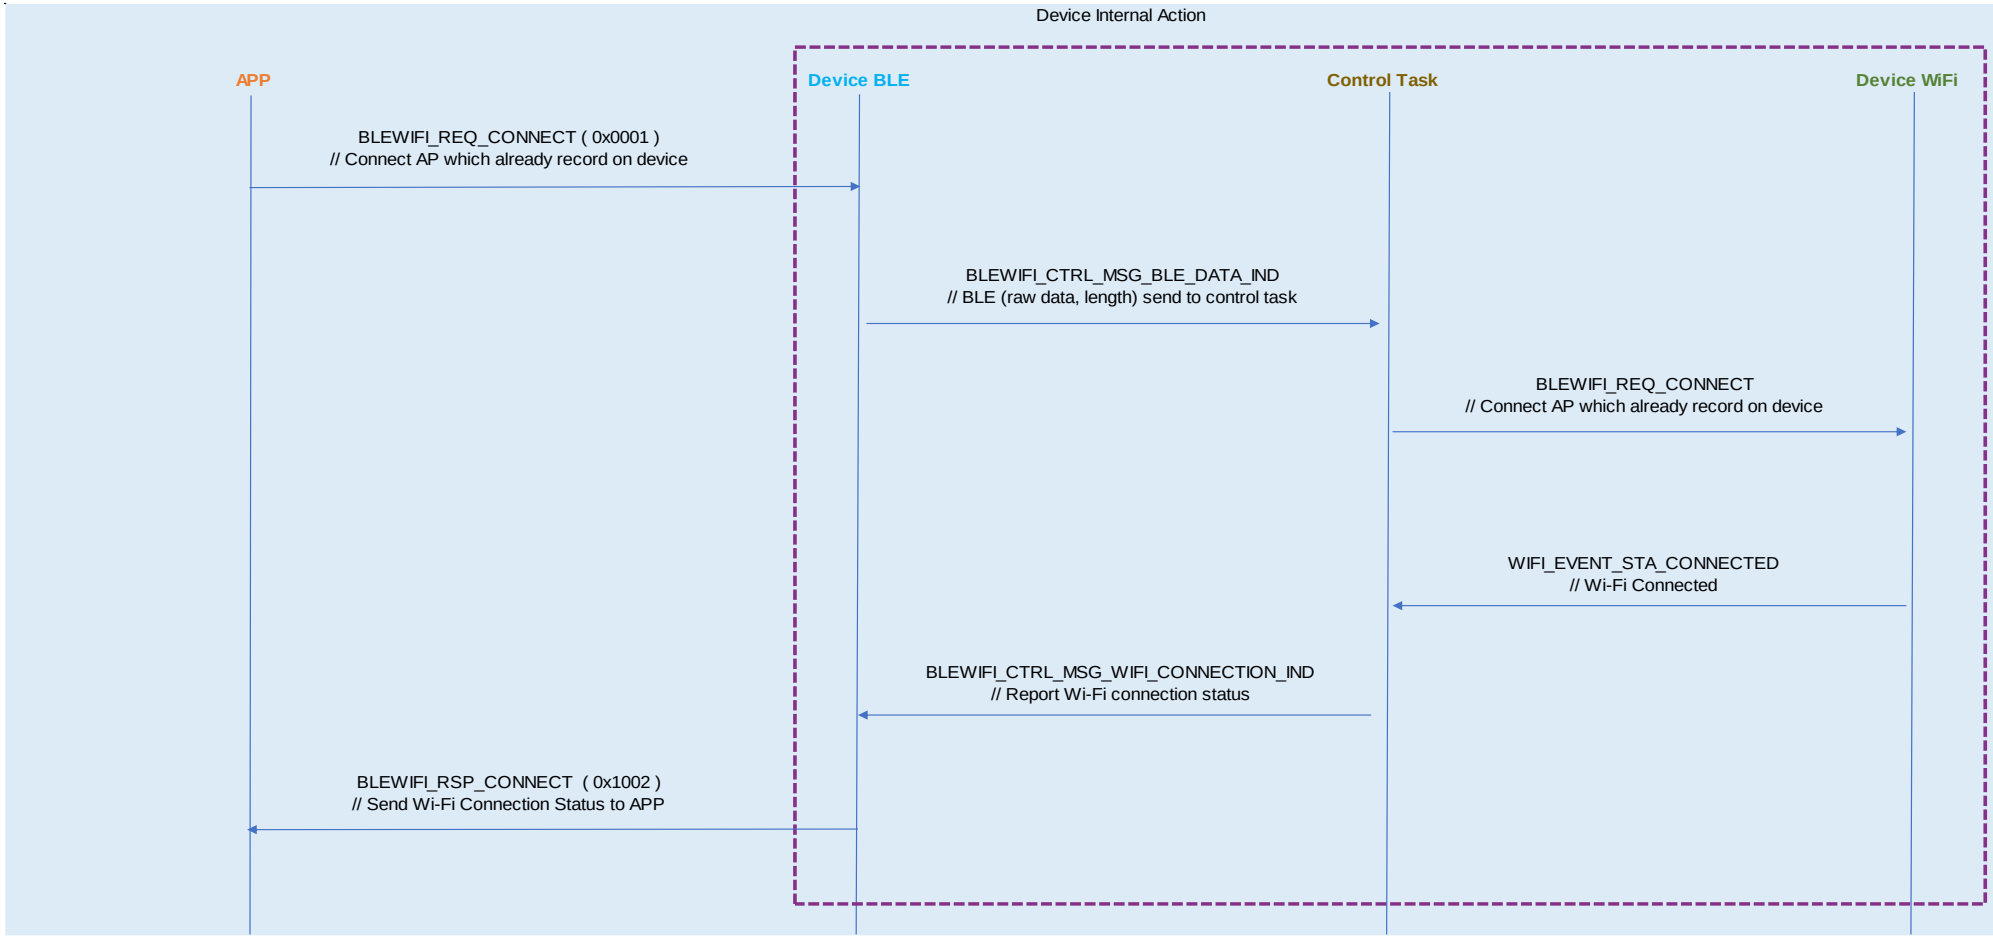
4.4. Wi-Fi Status



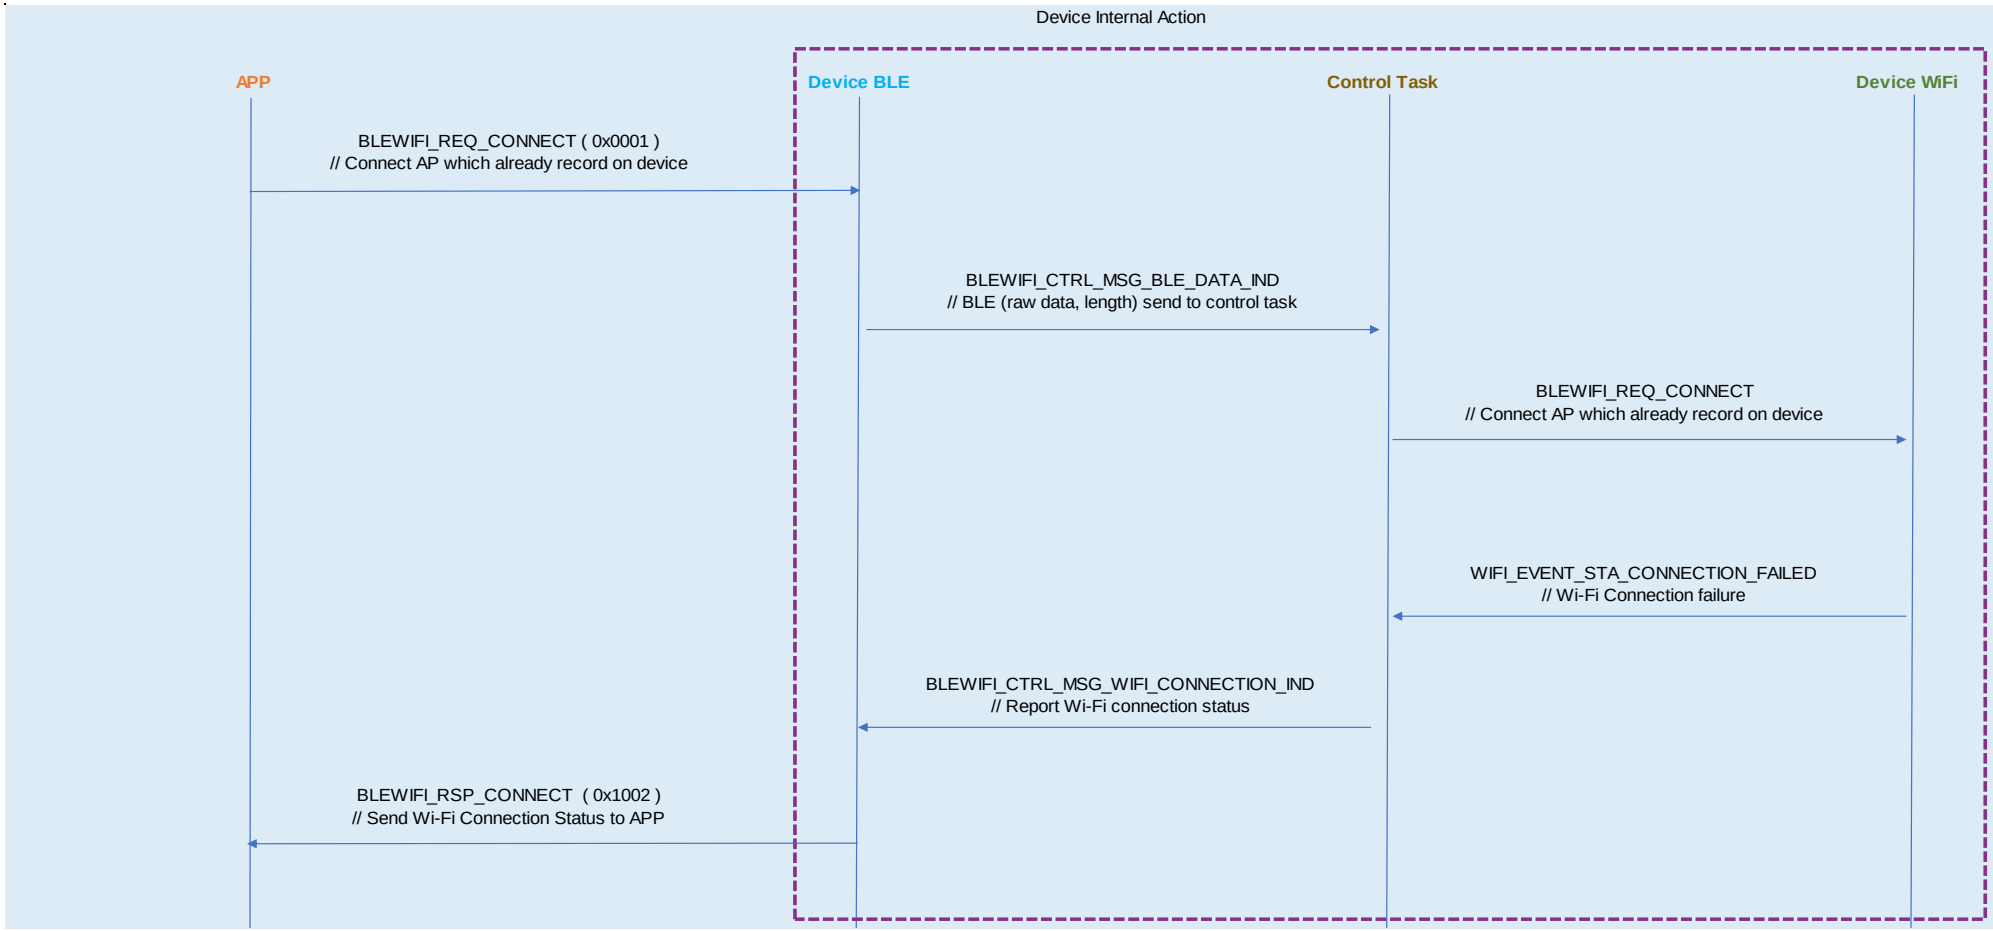
4.5. Wi-Fi Status (TimeOut)



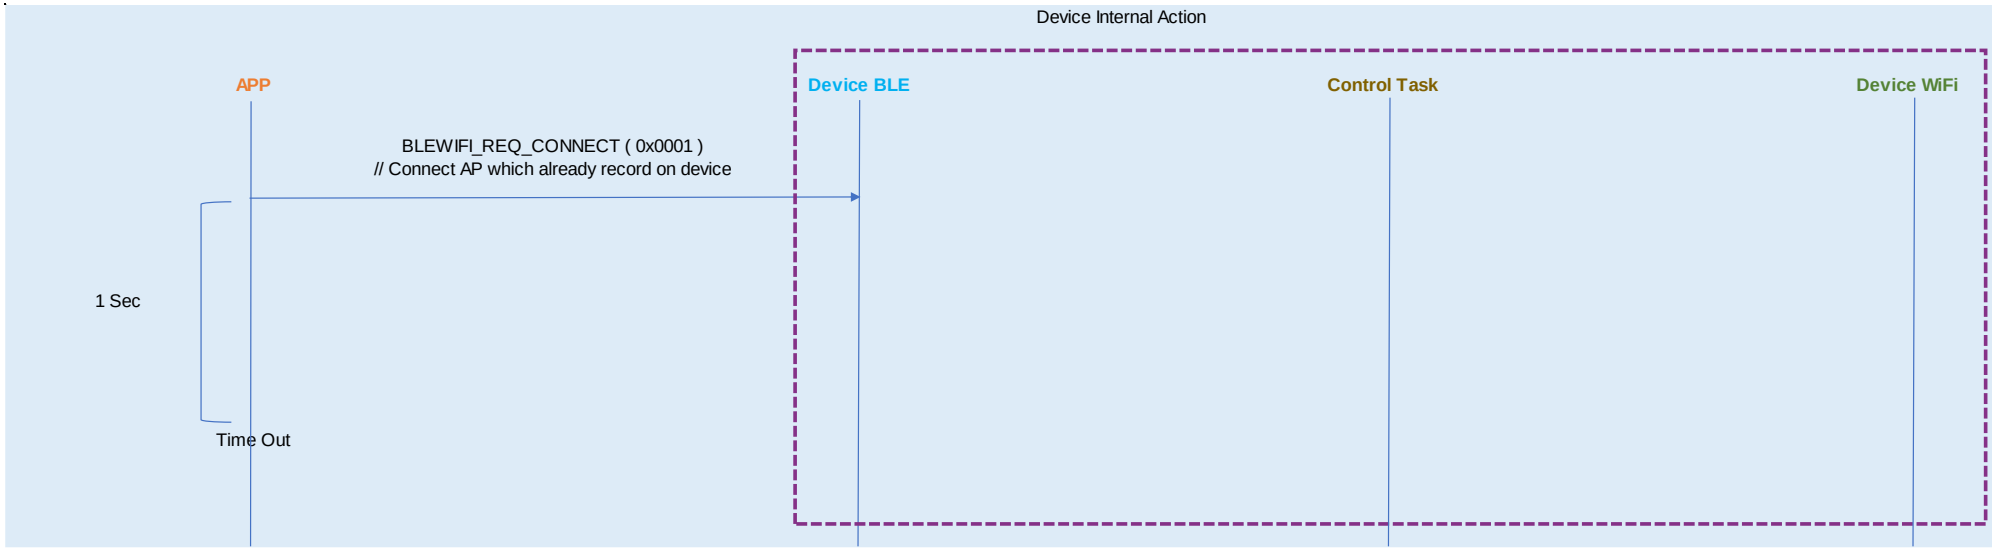
4.6. Wi-Fi Connect



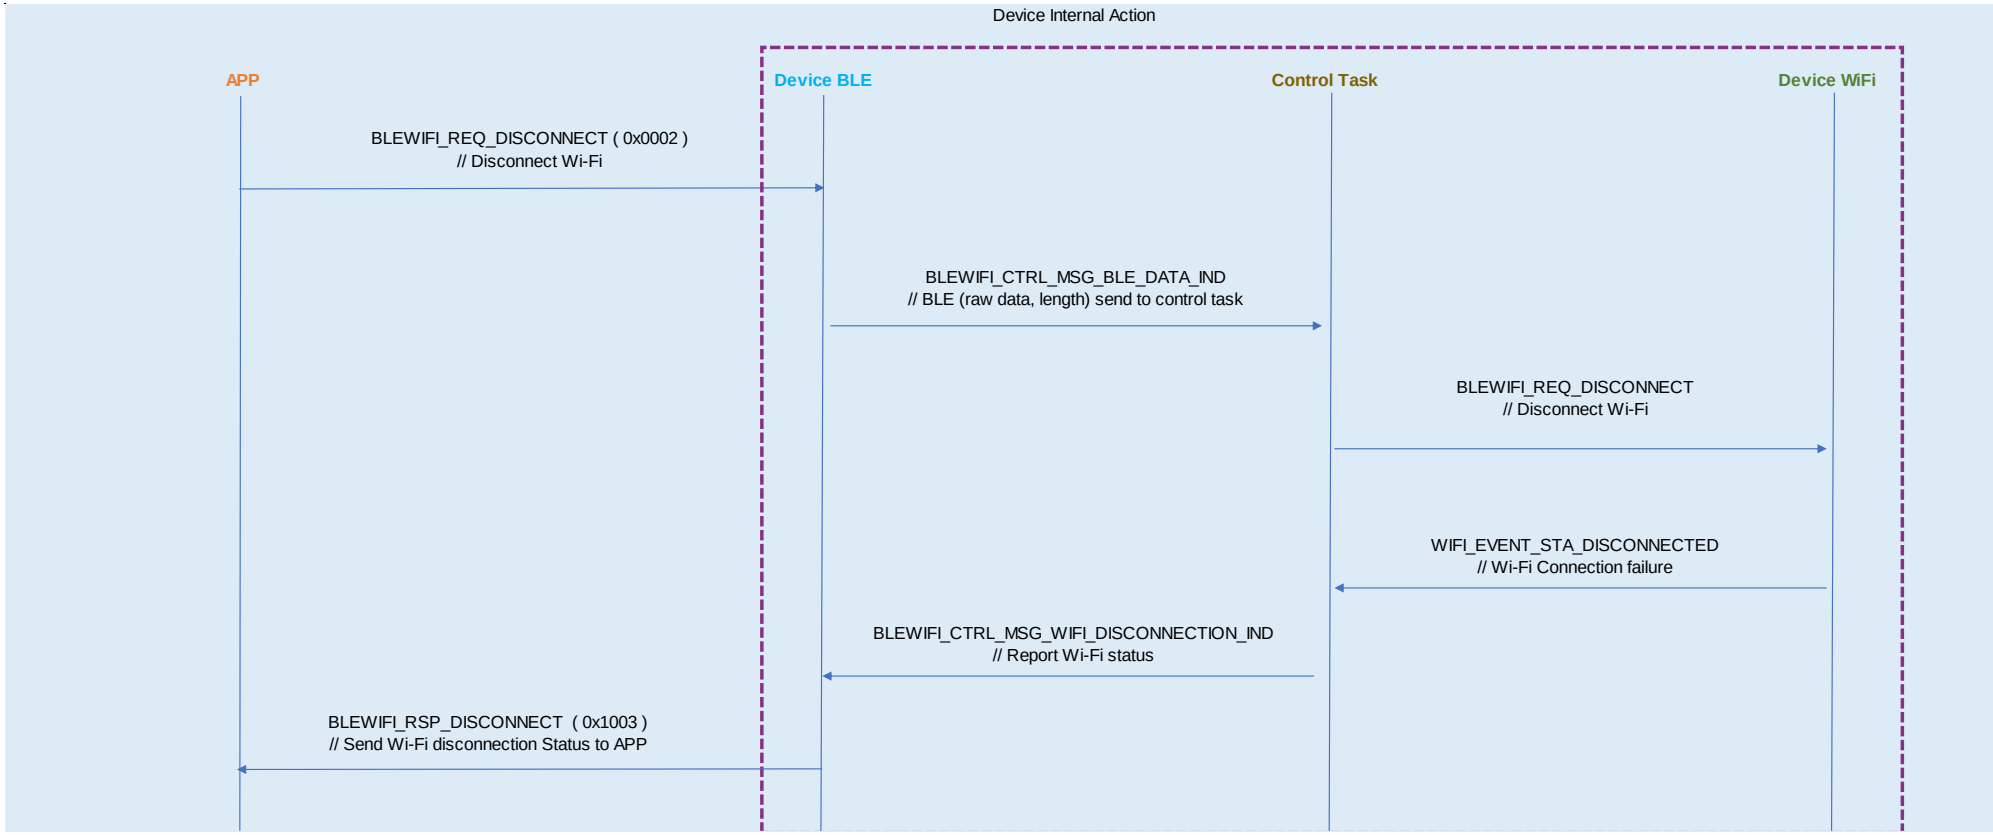
4.7. Wi-Fi Connect (Failure)



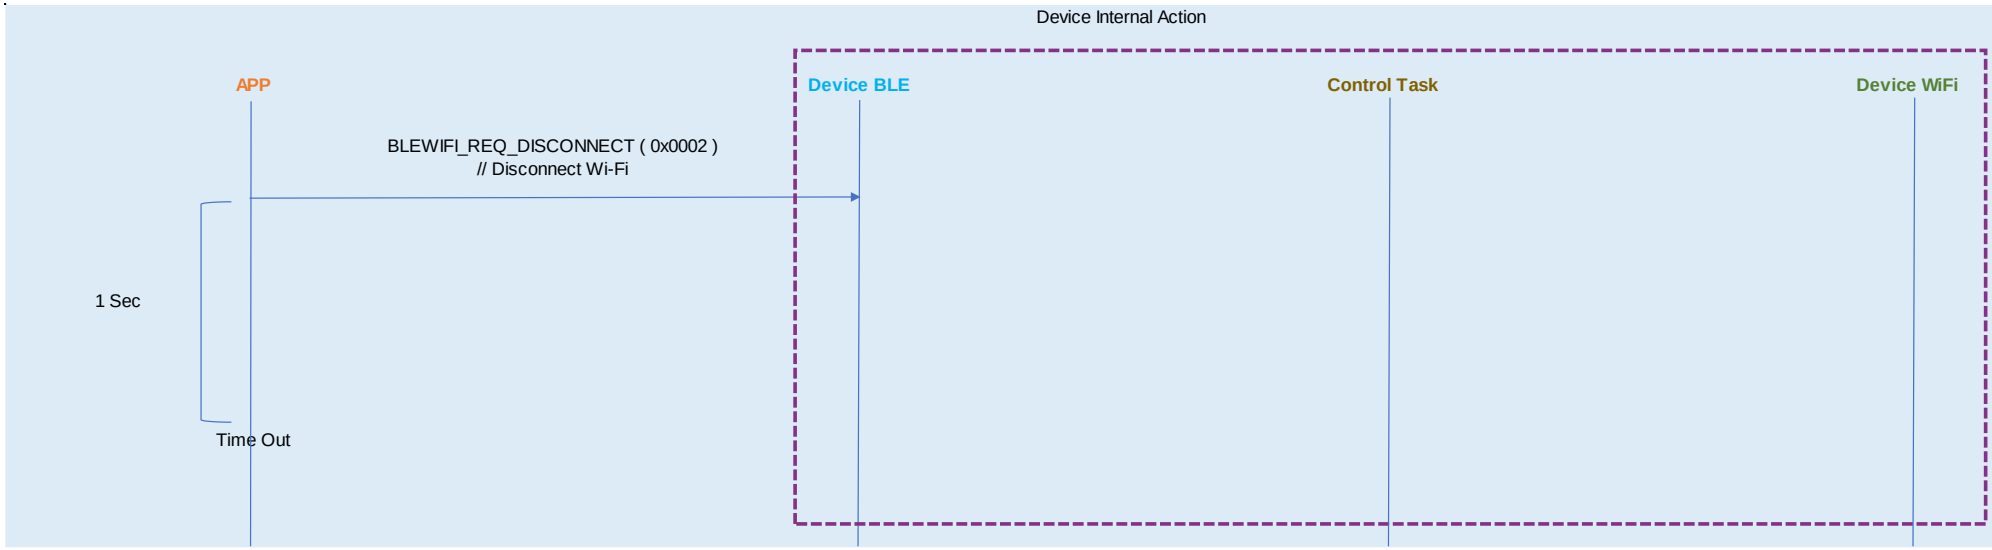
4.8. Wi-Fi Connect (TimeOut)



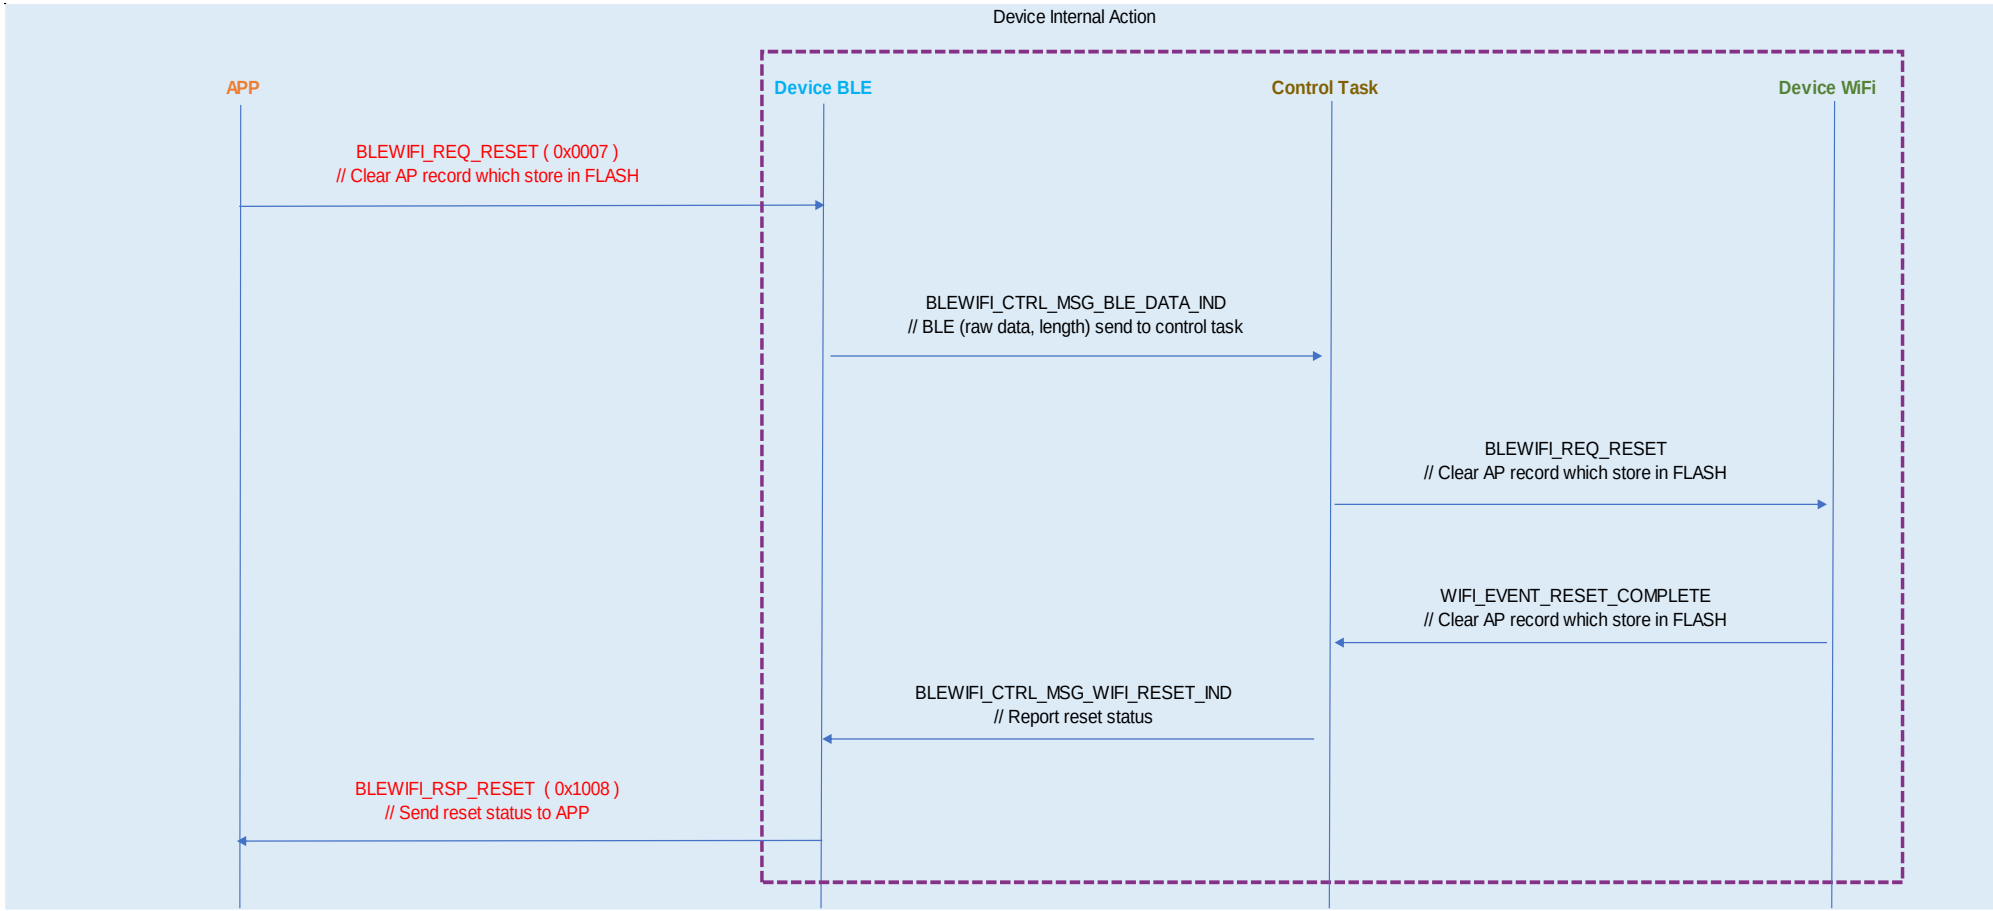
4.9. Wi-Fi Disconnect



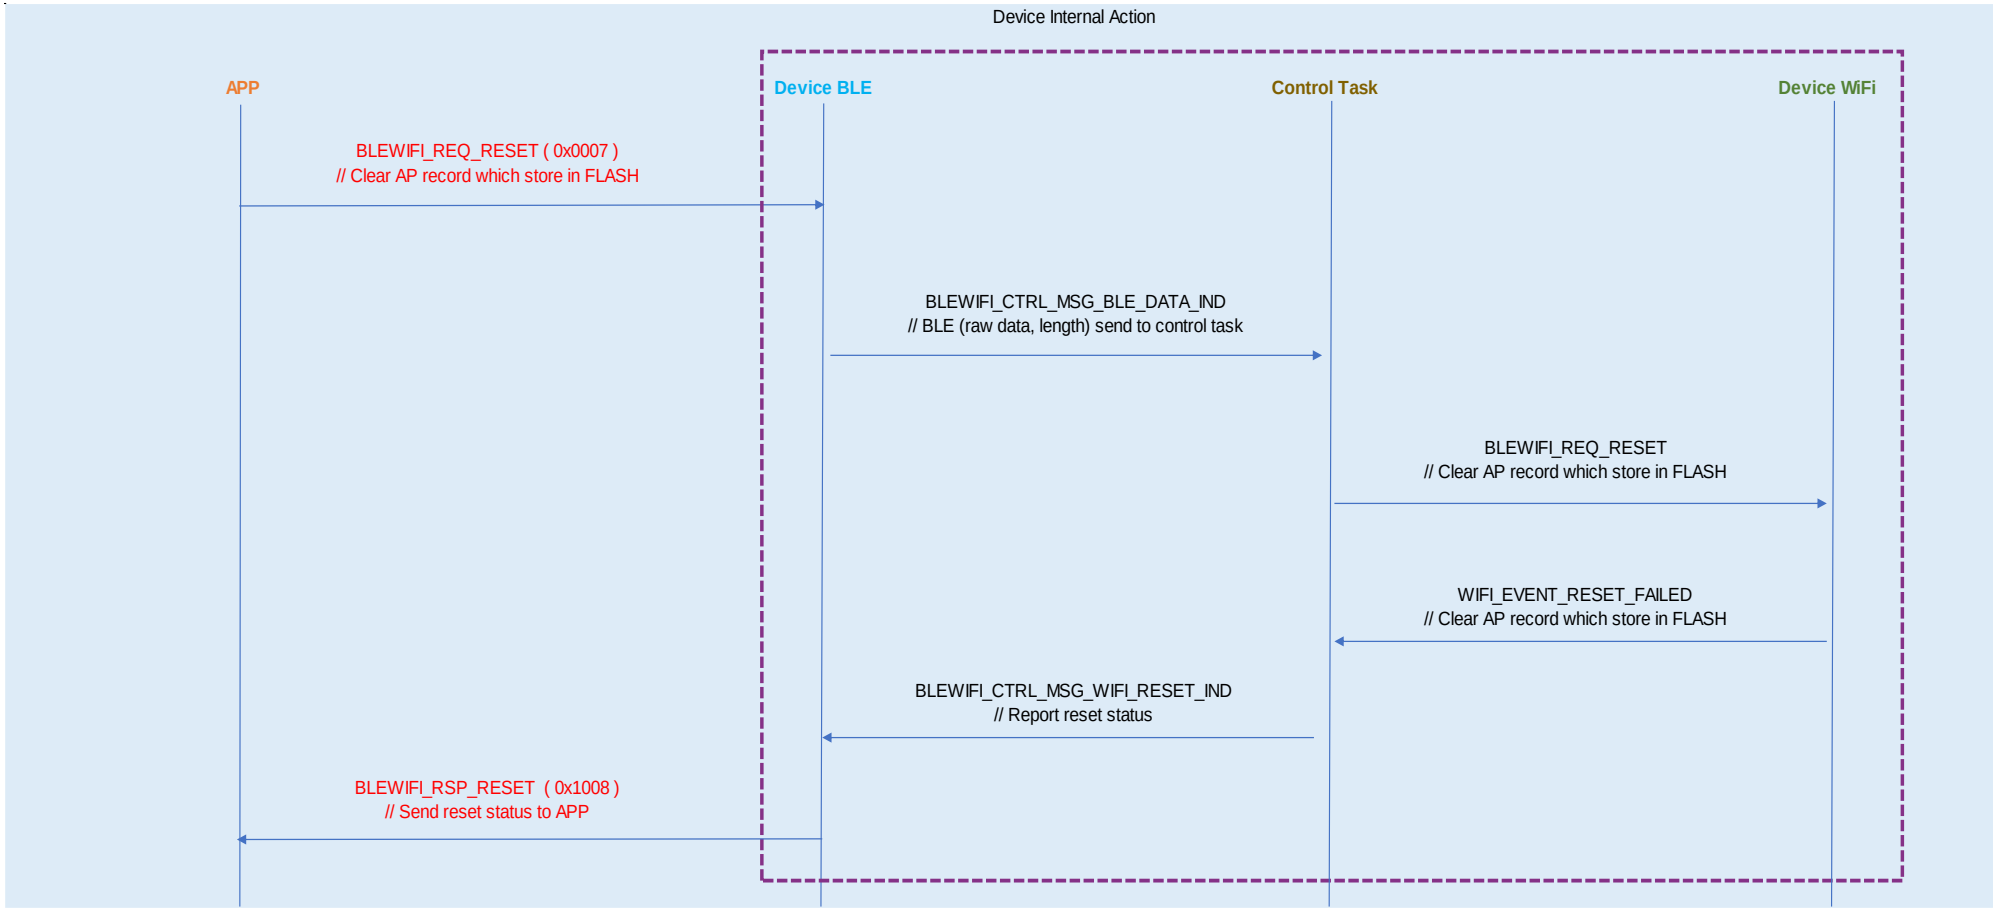
4.10. Wi-Fi Disconnect (TimeOut)



4.11. Wi-Fi Reset



4.12. Wi-Fi Reset (Failure)



4.13. Wi-Fi Reset (TimeOut)
